

# ERYA

MÜHENDİSLİK ve  
PROJE YÖNETİMİ

## ABOUT US

ERYA with his remarkable experience in project management and expertise in investment, business development, tender and cost consultancy services, is Turkey's one of the most eligible consultancy firms, both for infrastructure and superstructure projects

ERYA was established in 2004 in Ankara to engage project management and consultancy services and until now has provided services for over 500 projects in favour of leading national and international companies and associations. In addition to Ankara Head Office and Istanbul Office Branch, ERYA has site offices where turnkey project management and consultancy services are provided.

## QUALITY CERTIFICATES

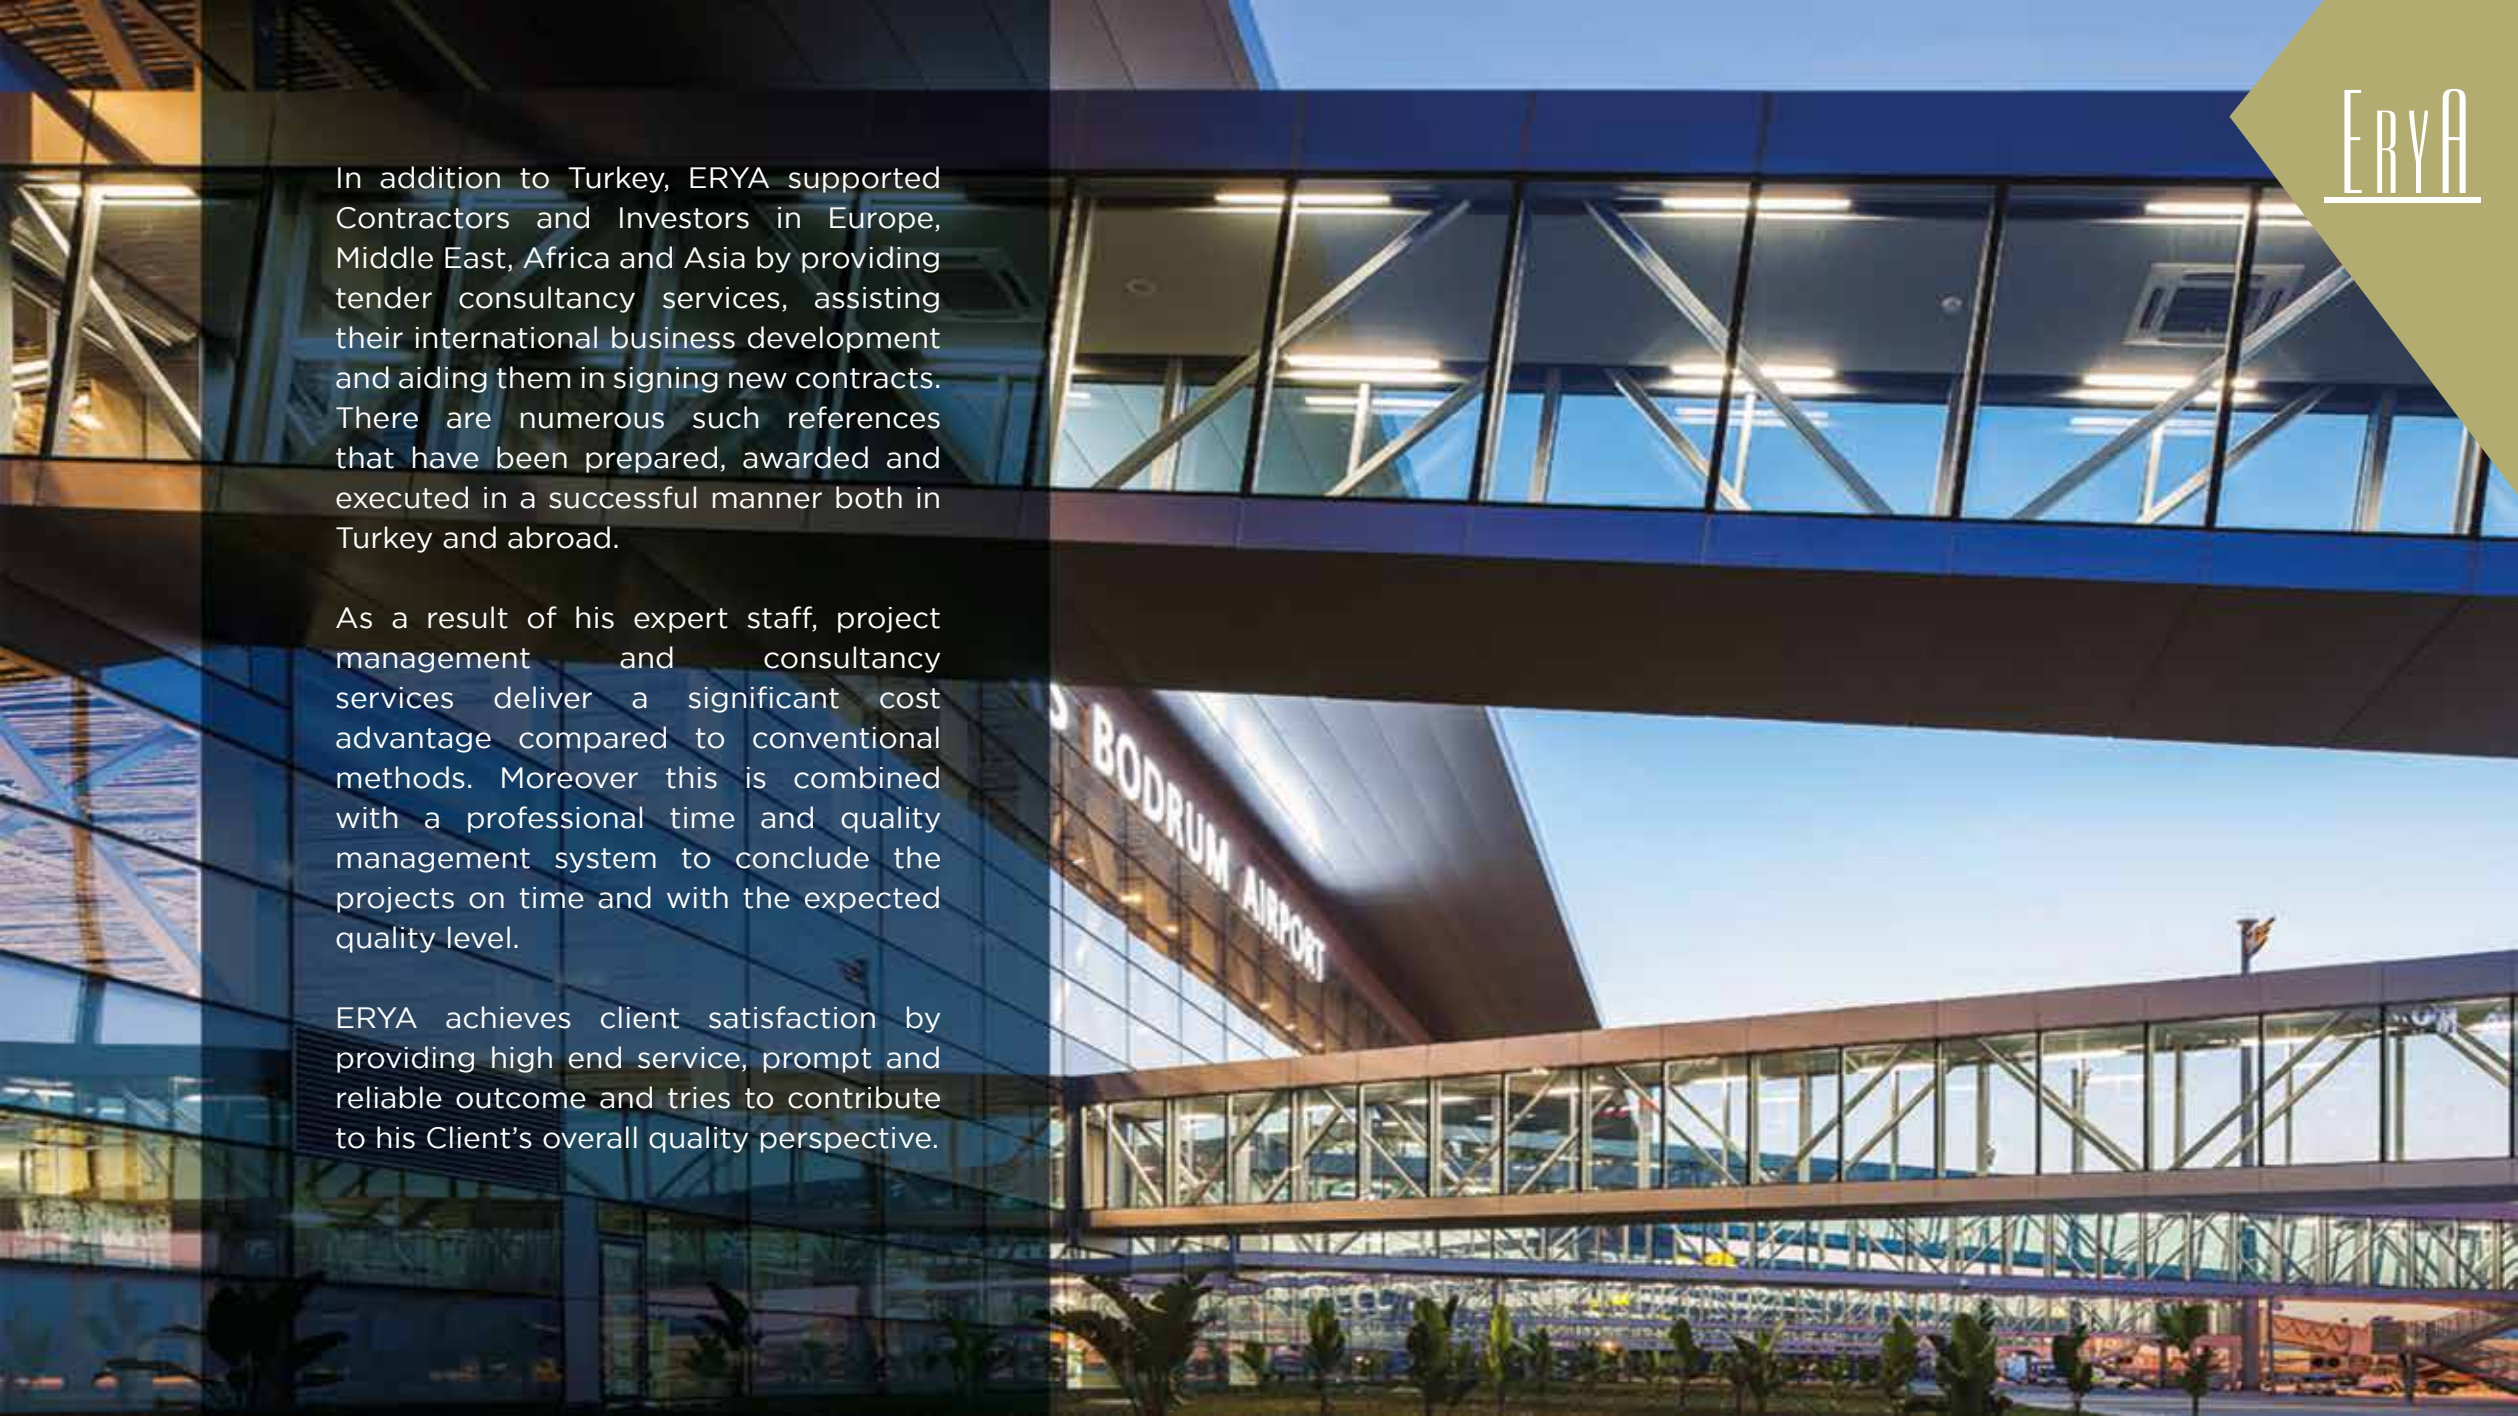

In addition to Turkey, ERYA supported Contractors and Investors in Europe, Middle East, Africa and Asia by providing tender consultancy services, assisting their international business development and aiding them in signing new contracts. There are numerous such references that have been prepared, awarded and executed in a successful manner both in Turkey and abroad.

As a result of his expert staff, project management and consultancy services deliver a significant cost advantage compared to conventional methods. Moreover this is combined with a professional time and quality management system to conclude the projects on time and with the expected quality level.

ERYA achieves client satisfaction by providing high end service, prompt and reliable outcome and tries to contribute to his Client's overall quality perspective.

# PROJECT MANAGEMENT & CONSULTANCY

The main purpose of Project Management Services is to utilize and execute construction management tools in accordance with the investors corporate culture, in order to achieve project goals like budget, quality and time.

By means of project management service, the conventional “Contractor + Engineer” composition of investment projects changes to “Project Management Company (PM) + Sub Contractors”. PM conducts the Sub Contractors like a Contractor and also inspects the works like an Engineer does. PM also coordinates all parties (designers, consultants, public authorities and bodies) during the life of the project.

As an end product of the system summarised above, the investor saves from the profit and overhead of the Contractor, and manages to make his investment only with the fee of an Engineering Organisation.

As an end product of the system summarised above, the investor saves from the profit and overhead of the Contractor, and manages to make his investment only with the fee of an Engineering Organisation.

The services provided, so as to contribute project budgets/ profitability, include monitoring the contractual rights and responsibilities and claim management.

**For achieving project success the following construction management tools are to be utilized and executed along the life of the project:**

- Design management (design review and coordination)
- Procurement management (preparation of tender documentation, tendering, signing of the contracts)
- Cost management (preparing and updating project budget; quantity surveys, periodic and final progress payment certificates)
- Time management (Implementation of a planning system; preparation of detailed schedules, periodical review of targets, update when necessary)
- Quality assurance and control
- Preparation of monthly and final payment certificates
- Monitoring the contractual rights; issuing of claims
- Site supervision
- Communication and document and management
- Testing & commissioning, temporary and final acceptances
- Dispute resolution consultancy
